

VIRTUATILT – PINBALL FX SETUP

Following some basic instructions to have your VirtuaTilt up and running with PinballFX.

NOTE: Pinball FX has many limitations and setup is very complicated; be prepared for troubleshooting if something goes wrong.

Please always refer to official DOFLinx guides available in the application zipfile:

<https://www.vpforums.org/index.php?app=downloads&showfile=12318>

DOFLinx Setup

PREREQUISITES: B2S Server already installed <https://github.com/vpinball/b2s-backglass/releases> and DirectOutput configured.

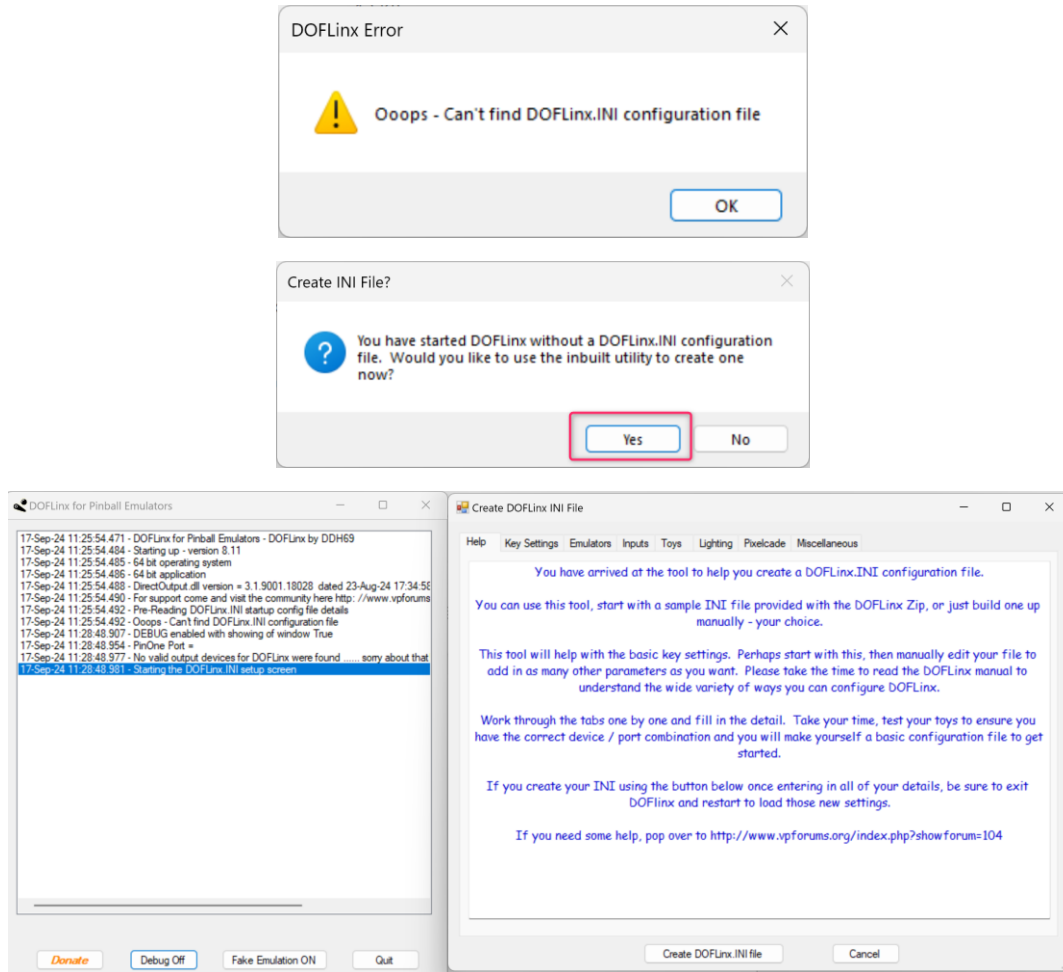

Create a folder **C:\DOFLinx** and uncompress the above zip package (remember to unblock it):

Run **Doflinx.exe** file in **DOFLinx\Starter 64 bit** folder as administrator:

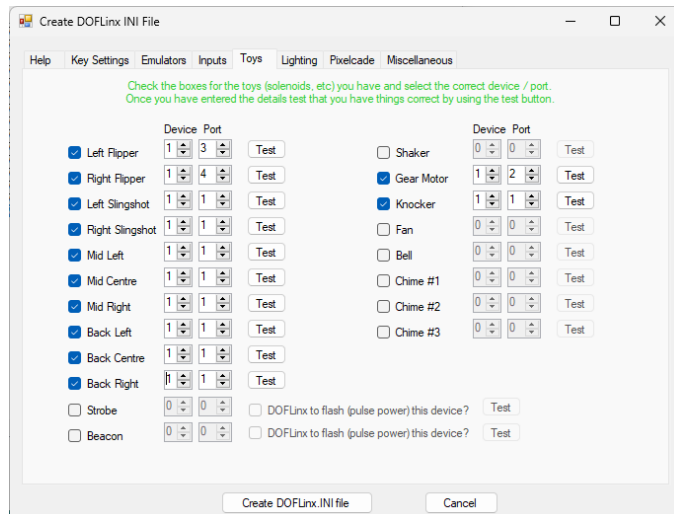

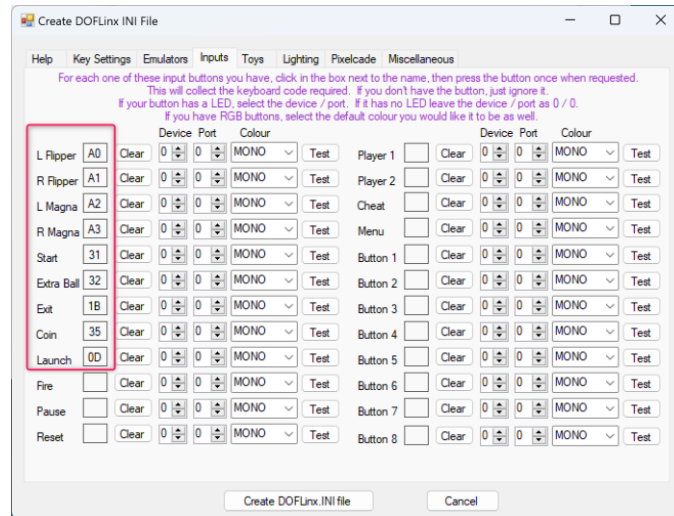

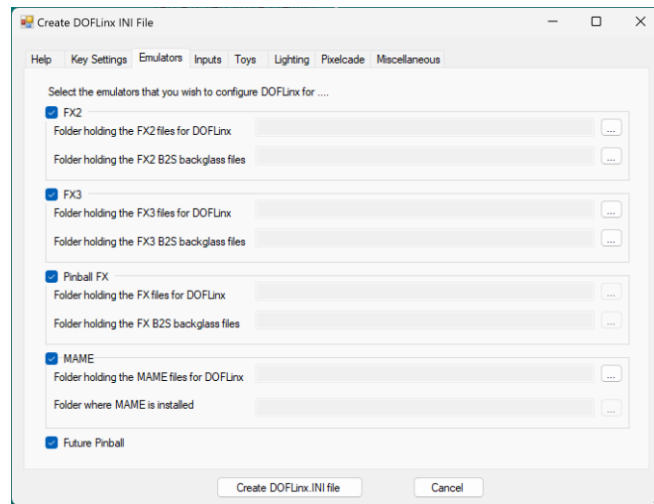

The first time you launch it it will popup an error and will ask to configure a new **DOFLinx.INI** file:

You need to configure **Key Settings, Emulators, Inputs and Toys** tabs:

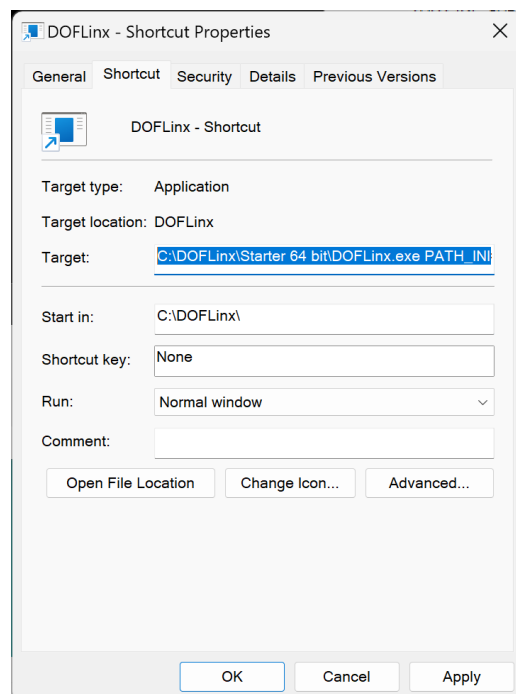

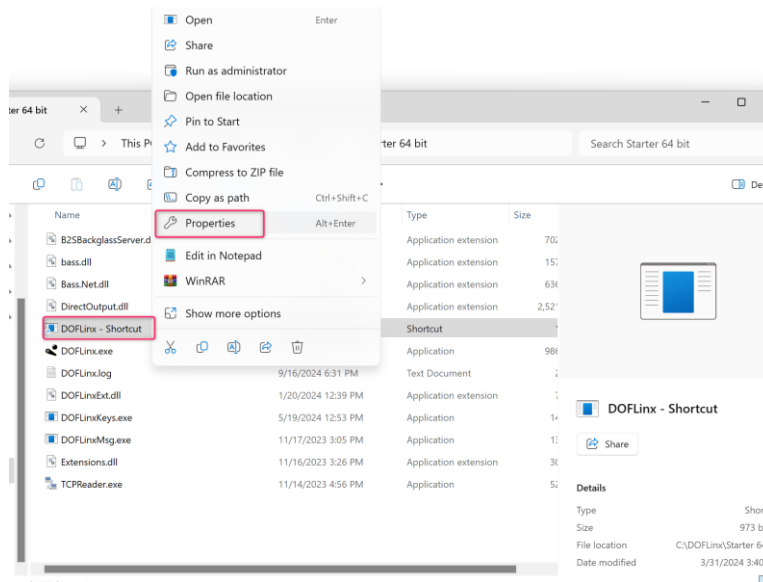

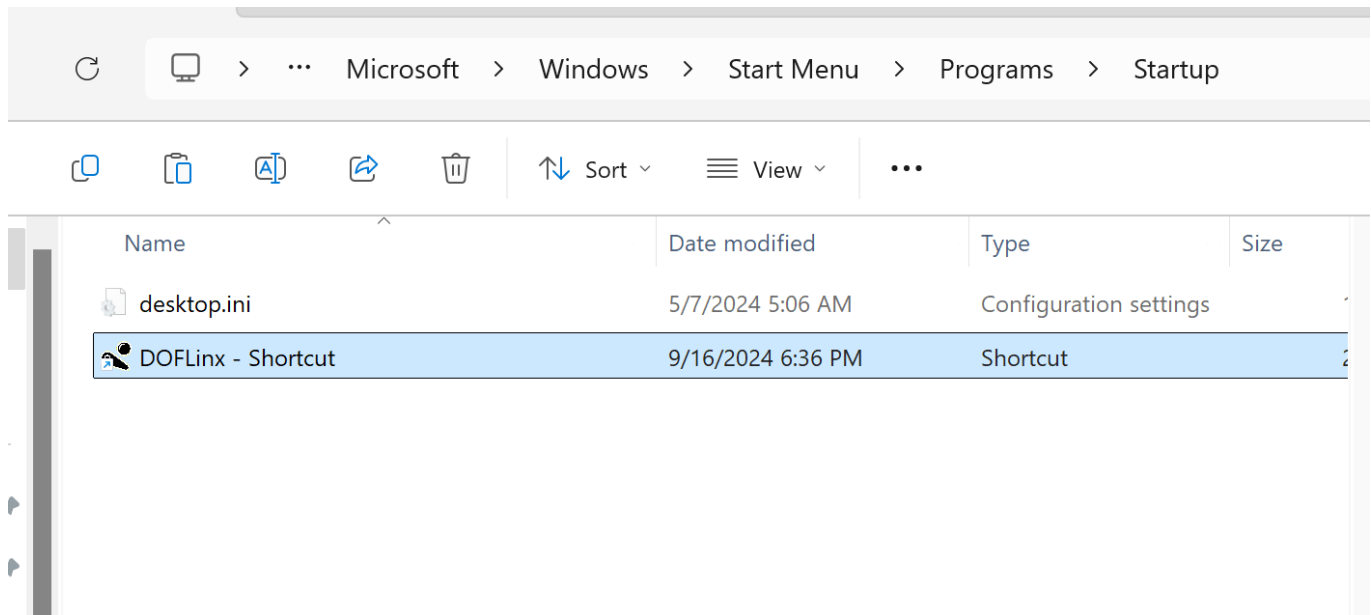

Click on “**Create DOFLinx .INI File**” when you’re done:

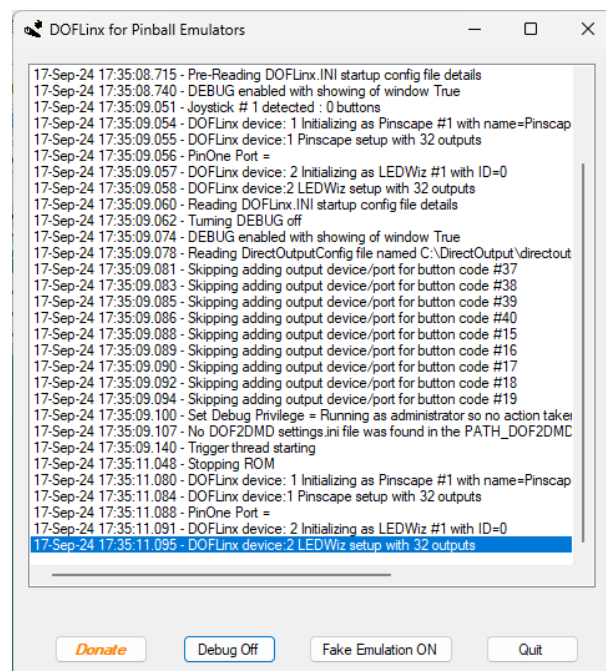

Edit properties of **DOFLinx – Shortcut.lnk** file and add the above string in Target field:

For automatic startup at every boot, put the shortcut in Startup folder:

Reboot the machine. If your DOFLinx.ini is configured correctly you should not have any error in debug log (launch DOFLinx.exe again to check):

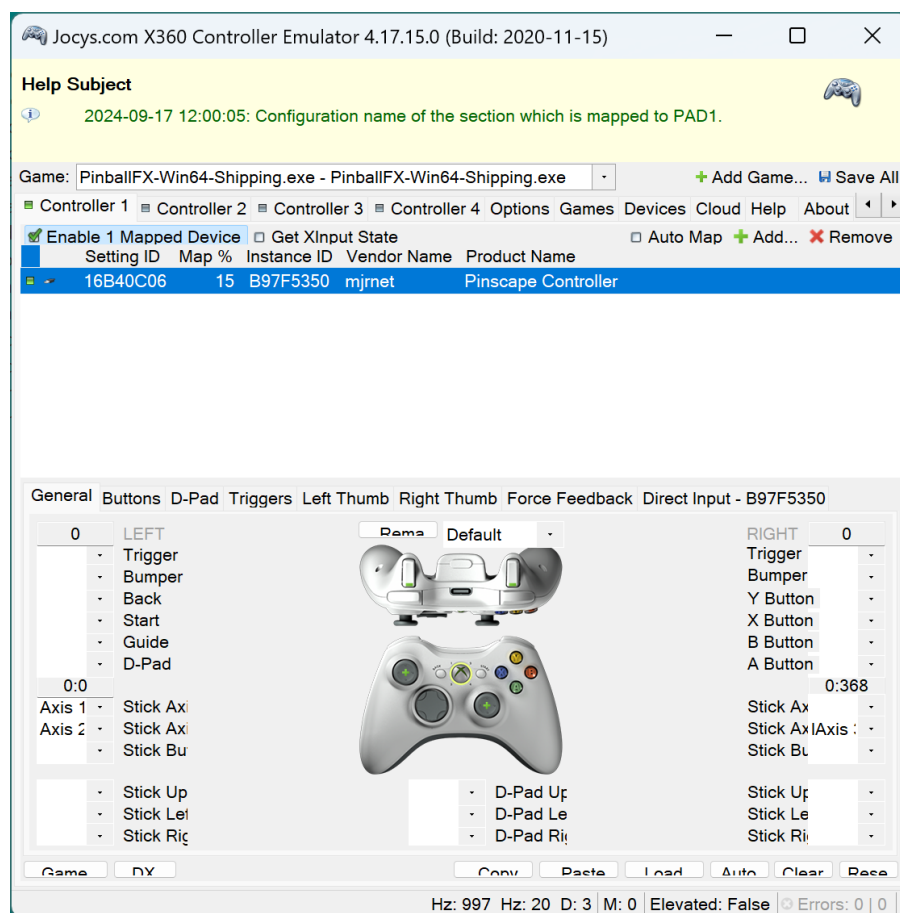

Accelerometer/Analog Plunger configuration

In order to configure KL25Z accelerometer for nudge/tilt and VirtuaTilt analog plunger, you should download **X360CE** emulator from <https://www.x360ce.com/>

Unblock the zipfile, uncompress in a folder of your choice (es: C:\vPinball\X360CE\) and launch **x360ce.exe**:

Click on **Add Game** and add the following game **C:\Program Files (x86)\Steam\steamapps\common\Pinball FX\PinballFX\Binaries\Win64\PinballFX-Win64-Shipping.exe**

IMPORTANT: On the **Controller 1** tab, uncheck the "Auto map" checkbox, click "**Add...**" to the right of that and add your Pinscape controller.

On the **General** tab below, click **Clear** and then set the **left stick X Axis** to **Axis 1** and **left stick Y Axis** to **Axis 2**. Set the **right stick's Y Axis** to **IAxis 3**.

On the **Left Thumb** (used for nudging) tab you'll likely want to adjust things for sensitivity. Following are good values to start with VirtuaTilt; you can use them and then modify according to your preferences:

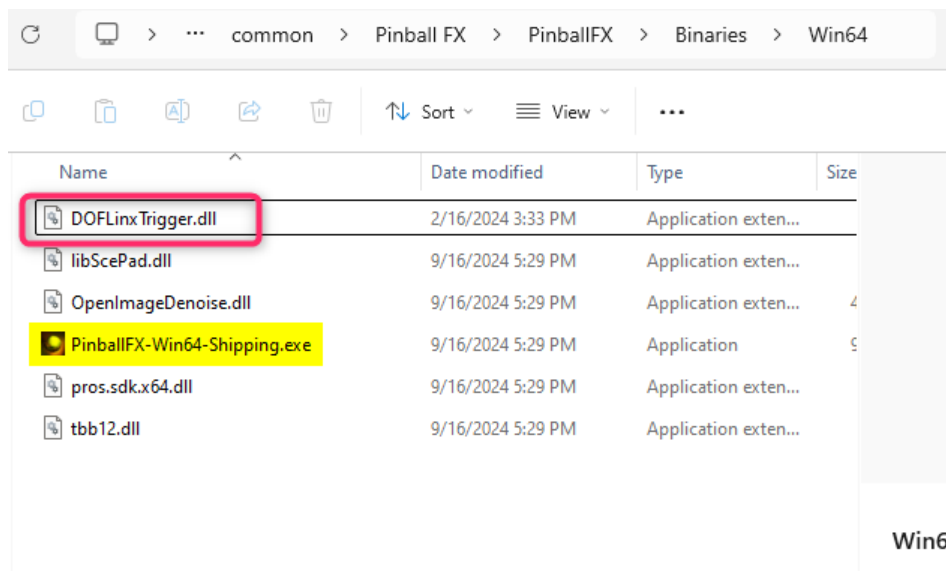

Click on **Save All** after you configured x360ce and leave it running in background.

IMPORTANT: X360CE should be running in background to have plunger/accelerometer functions in Pinball FX. Consider to put in Startup folder as we did for DOFLinx.

Enabling Pinball FX for DOFLinx

Copy **DOFLinxTrigger.dll** from where you unzipped the DOFLinx download to the same folder

as PinBallFX-Win64-Shipping.exe (**C:\Program Files (x86)\Steam\steamapps\common\Pinball FX\PinballFX\Binaries\Win64**)

Edit your **DOFLinx.INI** to make Pinball FX activate DOFLinx by adding in the **PROCESSES=** line **PinballFX-Win64-Shipping**, so if you want MAME and PinballFX to activate DOFLinx you would have:

PROCESSES=Mame64,PinballFX-Win64-Shipping

Note: **PinballFX-Win64-Shipping** is the process to monitor for, but you still run **PinballFX.exe** to start PinballFX.

Be sure to have the **PATH_FX=** and **PATH_FX_B2S=** parameters pointing to the place you put the FX files.

Make sure you have a \ on the end of the path, so **C:\DOFLinx\FX**

You can get the complete set of active backglass for Pinball FX from

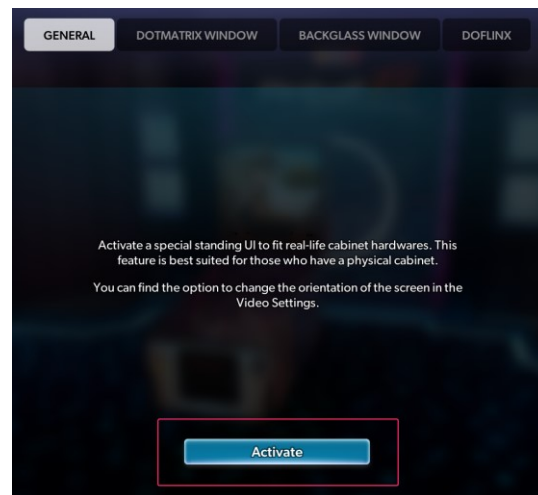

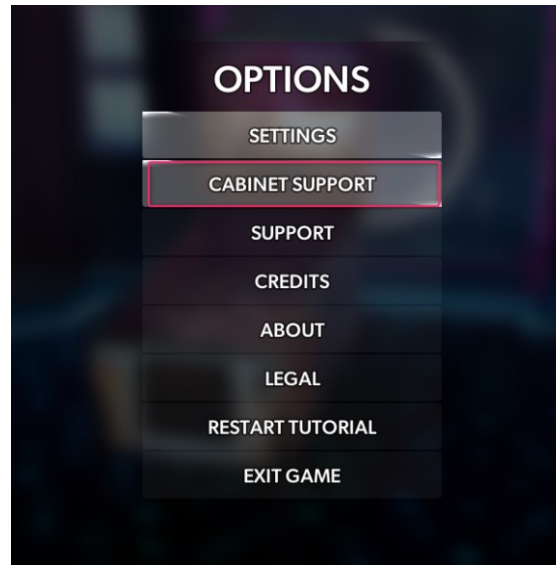

<https://drive.google.com/drive/folders/1AjJ8EQo3AkmG2mw7w0fLzF9HcOjFoUZH?usp=sharing>

and place them in the folder you just setup above.

IMPORTANT:

Copy now the contents (all files) of "**C:\DOFLINX\STARTER 64 bit**" to **C:\DOFLINX** and reboot.

Start Pinball FX, go to Settings | Cabinet Support | General and **activate cabinet mode**:

Go to the DOFLinx tab, enable it:

Start Pinball FX and have fun. If everything was setup correctly you should see DOFLinx logo during loading:

DOFLinx.INI file for VirtuaTilt

You can have a look at the following **DOFLinx.ini** file as a reference for your VirtuaTilt. Be sure to correctly configure all paths:

```
