

VIRTUATILT BASIC CONFIGURATION AND SETUP

Following some basic instructions to have your VirtuaTilt up and running quickly.

VirtuaTilt controller is powered by FRDM KL25Z board with Pinscape software already installed.

Please always refer to official Pinscape build guide available here:

http://mjrnet.org/pinscape/BuildGuideV2/BuildGuide.php?sid=kl25zSoftwareSetup

KL25Z Software Setup

VirtuaTilt comes with a KL25Z "microcontroller", which is basically a tiny computer. **Pinscape firmware is already installed (latest version available at shipping time)**. That serves as both the operating system and the application software. It controls all of the virtual pinball functions of the KL25Z, including the sensors, buttons, and feedback devices, and it handles communications with Windows.

In addition to the Pinscape firmware that runs on the KL25Z, there's a separate Pinscape program that runs on your Windows PC, called **ConfigTool**. This provides an interactive interface for setting up the device, configuring it, and testing it. You don't need to leave the ConfigTool running all the time; it's only needed to set up and test the device. You can also run it again at any time to change options, update the firmware, or troubleshoot problems (it includes some testing features that can help debug the hardware setup).

The software installation process is all controlled from the PC. The Config Tool handles the KL25Z software setup, so the first step is to install the Config Tool on your PC. You can download it from the official page:

http://mjrnet.org/pinscape/swversions.php

To install, download the ZIP file above, unblock it (**very important!**) and unpack it into a folder on your hard disk. Use any location that's convenient. Open the folder and double-click the "**PinscapeConfigTool.exe**" application.

VirtuaTilt default config

Following is the default VirtuaTilt config in Pinscape. We recommend leaving it as-is for testing buttons, potentiometer, feedback devices, etc. You can obviously change it afterwards, according to your personal preferences. We also recommend saving it, in case you need to revert back to the original configuration:

Back up & Restore

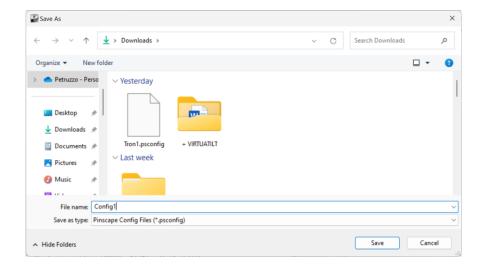

Pinscape Unit #1 | LedWiz Unit #1 | CPU ID 001A-004F9002-53274E45

Saves the configuration settings from the KL25Z to a file on your PC. You can use this file as a data backup in case of hardware problems or data loss on the KL25Z. You can also use it to duplicate this device's settings on other devices, or share your setup with other people.

Restores the KL25Z to the settings saved in a backup file. You can use this to recover from data loss or hardware failures, or to restore working settings after making experimental or unwanted changes.

Settings

Configuration settings for KL25Z CPU ID 0049-004E9002-53274E45

Memory used: 9.5K bytes of 16K bytes (6,672 bytes free)

System type. Are you using this KL25Z on its own, or with a set of expansion boards?

 Stand-alone KL25Z (or your own custom boards)

Help

O Pinscape All-in-One

USB Identification. This is how the KL25Z identifies itself to Windows through the USB port.

LedWiz Unit 1 (USB Vendor ID FAFA, Product 00F0)

- If you have a real LedWiz unit in your system, choose LedWiz Unit 8 for your first Pinscape unit, 9 for the second, etc.
- If you don't have any real LedWiz units, choose LedWiz Unit 1 for the first unit, 2 for the second, etc.

I want more details!

Pinscape ID. This is a separate ID from the LedWiz unit number. DOF R3 and the DOF Config Tool use this ID to identify the unit. Set this to 1 for your first unit, 2 for the second, and so You don't have to copy the LedWiz unit number here! This is completely unrelated to the LedWiz number. This setting must always be 1 for your first (or only) Pinscape unit, or DOF won Pinscape Unit 1

Reset on disconnect. If the USB connection is broken, and can't be re-established within a time limit, the KL25Z can automatically reset itself as an attempt to fix whatever's wrong. Select

Time before reboot (seconds): 10 🕏

Details

TV ON switch. If one or more of your monitors needs to be turned on manually every time you power up your cabinet, you can use this feature to switch them on automatically. See the f

IR Remote Control. The controller can send and/or receive IR remote control signals if you attach some additional components. This can be used with the IV ON feature to turn your cab details on the components required and how to connect them. If you don't have any IR components attached or wish to disable them, simply set the pin assignments here to "Not Connect

IR LED (transmitter) pin: IR receiver input pin: Not Connected

Requires a PWM-capable pin Requires an interrupt-capable pin

Joystick input. The controller acts like a Windows USB Joystick in order to send the plunger position, accelerometer readings (for nudging), and button input

✓ Enable joystick input Why would I want to disable Joystick axis format: X/Y/Z

NOTE: Nightmode on VirtuaTilt is enabled for all feedback devices. You can choose to enable/disable for specific devices from the above settings page.

3DPTronicsButtons Mapping

This is the default VirtuaTilt buttons mapping:

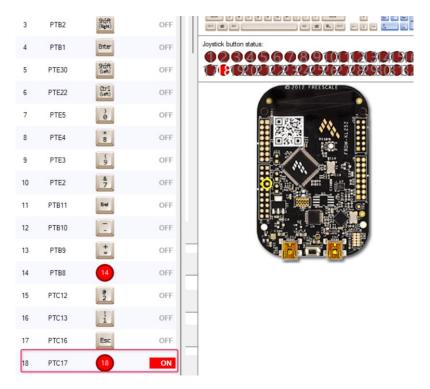

Default Control	Ке	yboard Config	Button Color
Left Flipper	Shift (Left)	Left Flipper	
Left MagnaSave	(trl (Left)	Left MagnaSave	
Right Flipper	Shift (Right)	Right Flipper	
Right MagnaSave	(Right)	Right MagnaSave	
Start	i	Start Game	
Coin In	5	Coin In	
Exit/Cancel	Esc	Exit to menu	
Launch Ball	Enter	Plunger/Launch Ball	
Extra Ball	2	Extra Ball (Buy-In)	
Fire!	To be assi	gned on Visual Pinball	

VirtuaTilt - Setup Guide v1.3

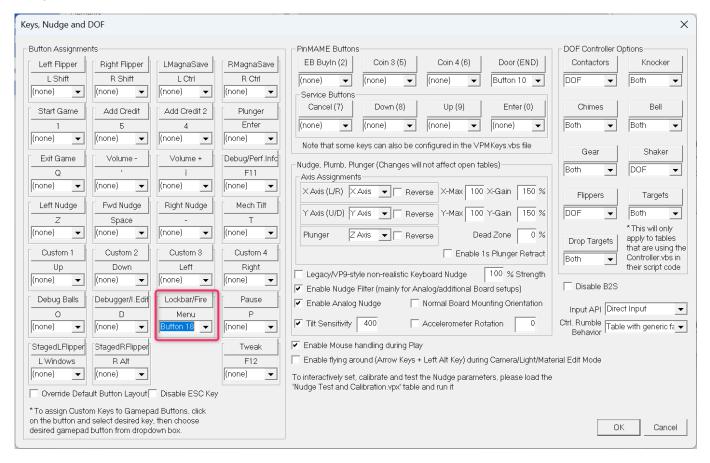

Fire Button assignment

To assign fire button, check the corresponding button number in Pinscape config tool (button 18 in this case):

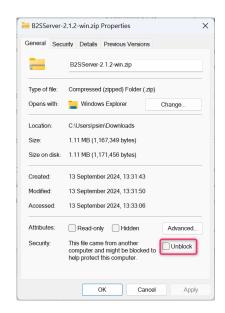

Assign same button number in Visual Pinball:

Installing DOF

You need B2S Server installed first. If you have already installed it, skip this B2S Server part.

For first-time users, download latest version from here: https://github.com/vpinball/b2s-backglass/releases and unblock it:

Unzip the B2SServer archive in VisualPinball folder (typically **C:\vPinball\VisualPinball\Tables**) and run the **B2SBackglassServerRegisterApp.exe** as Administrator (right-click). This registers the software as a COM object:

Latest version of DOF allows merging of X86 and X64 installs. **64bit versions only of both VPX and DOF are highly recommended.**

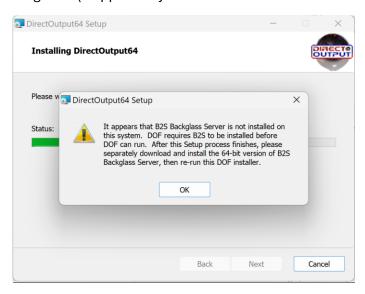

Install DOF using .msi files from official page: http://mjrnet.org/pinscape/dll-updates.html and launch it:

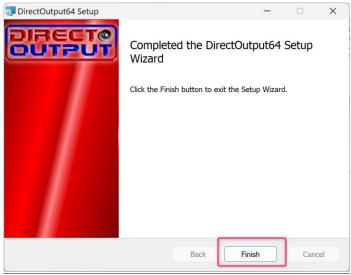

Leave installation folder as-is (C:\DirectOutput). Highly recommended:

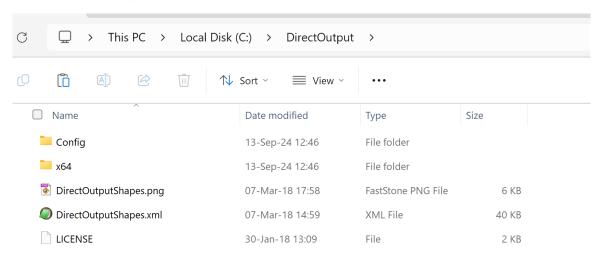

Do not care about the following error (it appears if you don't have B2S Server installed) and click OK:

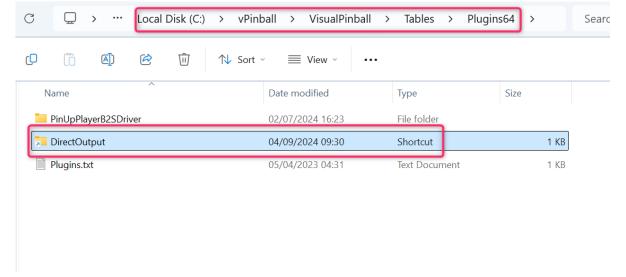

This is how the **\DirectOutput** folder will look like:

A shortcut to DirectOutput folder in **\Plugins64** folder of B2SServer installation should be present (created by DOF setup):

VirtuaTilt - Setup Guide v1.3

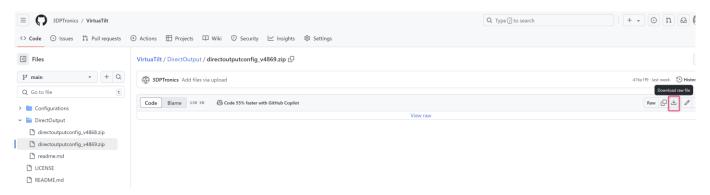

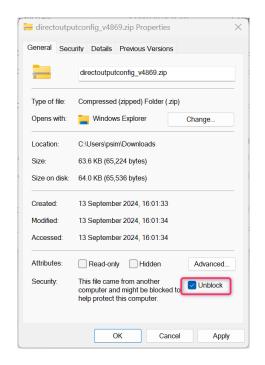

If not, manually create a shortcut to **DirectOutput** folder and put it in **Plugins64** folder of B2SServer installation.

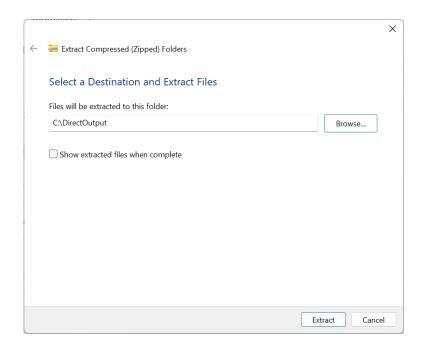

As a reference, the official step-by-step guide for DOF configuration is available here: <u>Pinscape Build Guide (mirnet.org).</u>

Configuring DOF for VirtuaTilt

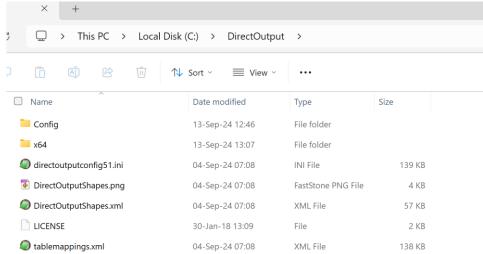

In order to configure DOF you need to set up a configuration file. You can create an account and login to the **DOF Config tool** page or **you can just download provided config files from our GitHub repository**, unblock the file and copy/move the files into **C:\DirectOutput** directory (or wherever DOF is installed on your PC), overwriting existing files:

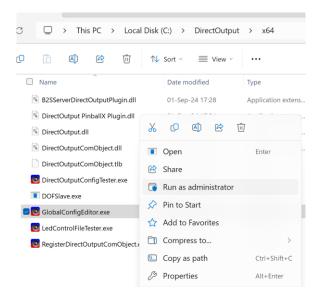

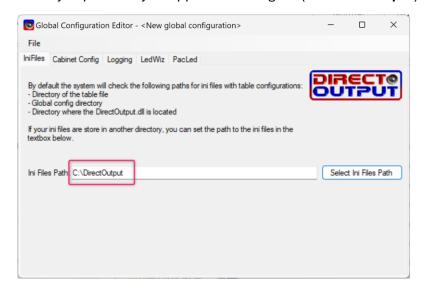

This is how the **DirectOutput** folder will look like:

Now right-click **GlobalConfigEditor.exe** file in **/DirectOutput/X64** folder and launch it as Administrator:

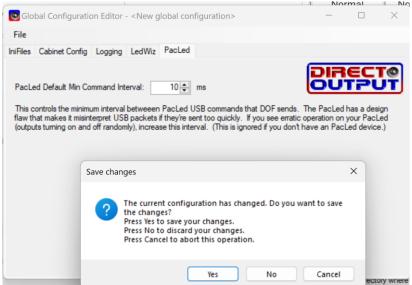

Configure .ini file path where you previously unzipped our config file (C:\DirectOutput):

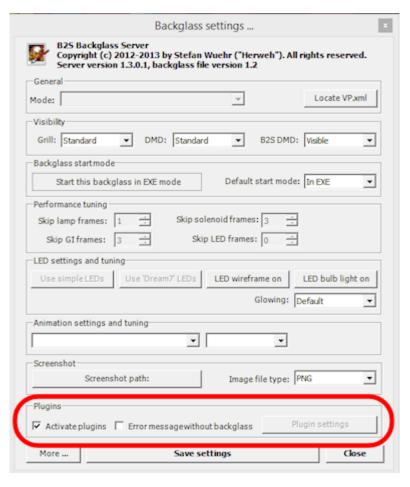

Close the window and press Yes to save all changes:

VirtuaTilt – Setup Guide v1.3

3DPTronics

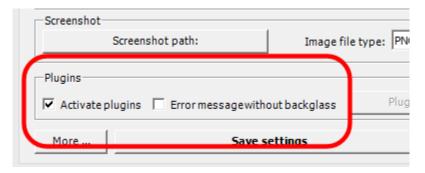

Start Visual Pinball and load a table that has a matching B2S backglass file installed; right-click the mouse anywhere in the backglass area to bring up the B2S options dialog:

Check the box **Activate plugins** and uncheck the box **Error message without backglass**.

Make sure that Activate plugins flag is checked and Error message without backglass flag is un-checked

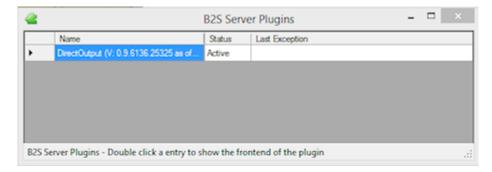

- Click Save Settings
- Exit the table (press "Q" and then "Q" again) and close VP

Now start VisualPinball and load a table that has a B2S backglass. You can use the same table you used during the setup procedure in the step where we updated the B2S backglass settings.

As before, when the backglass appears, right-click the mouse anywhere in the backglass display area to bring up the options dialog. Look to see if the **Plugins** button at the bottom is **enabled**:

If the button is disabled, DOF isn't getting loaded. Go to the official <u>troubleshooting</u> section for things to try. If the button is enabled, click it. This will bring up a separate dialog that shows the status of each plugin.

VirtuaTilt – Setup Guide v1.3

3DPTronics

Look for a **DirectOutput** entry in the list. If you don't see any such entry, it means the same thing as a disabled Plugin Status button, namely that DOF isn't being loaded. Go to the official <u>troubleshooting</u> section for help.

Finally, check the Status and Last Exception columns for the Direct Output entry.

If the Status is Disabled, or there's a message in the Last Exception box, see the official troubleshooting section for help.

If the Status is **Active** and the Last Exception column is empty, congratulations! Your DOF setup work was successful! DOF is loading and starting correctly.

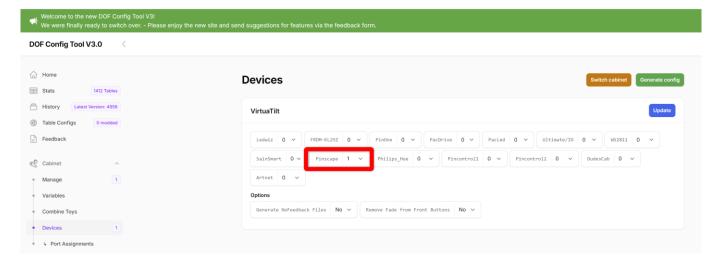

Changing DOF Configuration

Select your device

If you want to change the default DOF configuration for VirtuaTilt, you need to create an account and login to the **DOF Config tool** page.

Once you have an account setup, go to **Devices** and select the number of devices for your setup.

Select 1 for Number of Pinscape Devices and then click on Update:

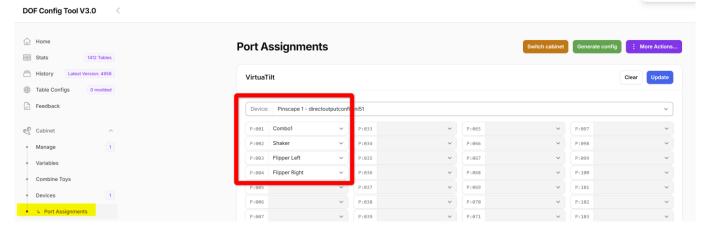

Creating a config file

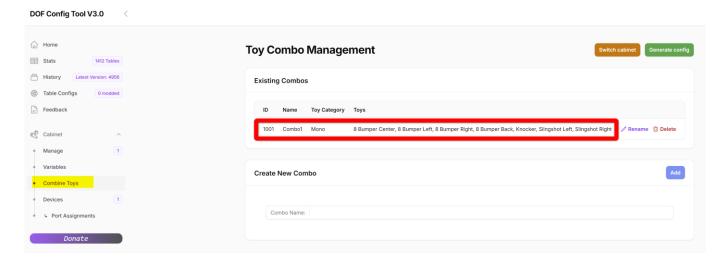

When creating a config file for your setup, it's simply a matter of selecting the outputs for each device in your cabinet. VirtuaTilt is already configured this way:

- Port1 Solenoid Combo for bumpers and slingshots
- Port2 Shaker Motor
- Port3 Left Flipper Solenoid
- Port4 Right Flipper Solenoid

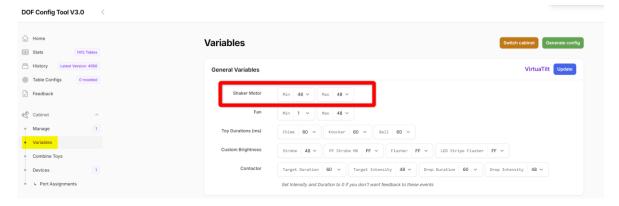

The **Combo1** config is assigned to slingshots and bumpers:

You can change it according to your personal preferences. To do this, simply navigate to the "**Combine Toys**" section in the config tool and enter your new combos.

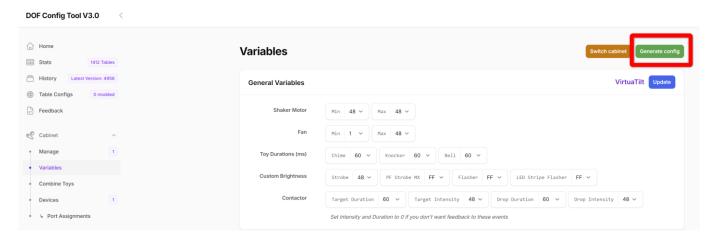

NOTE: Shaker Motor Intensity is already set at Maximum (48). You can change it according to your personal preferences:

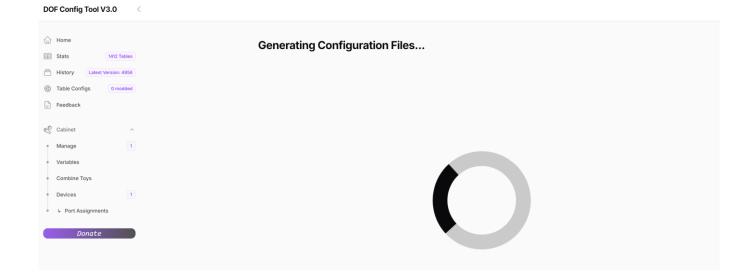

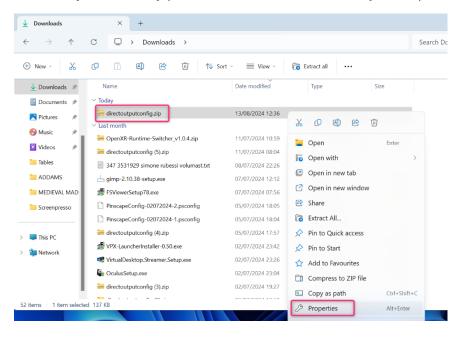

Setting your config in DOF

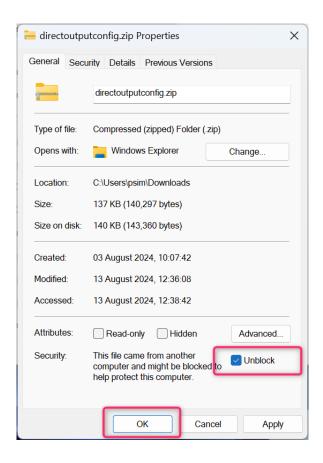

Once you have everything set in the config tool, click the **Update** button, then **Generate Config** button:

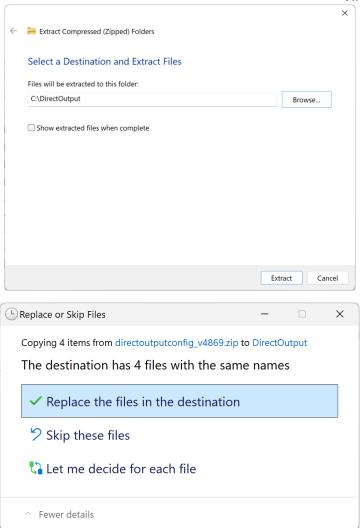

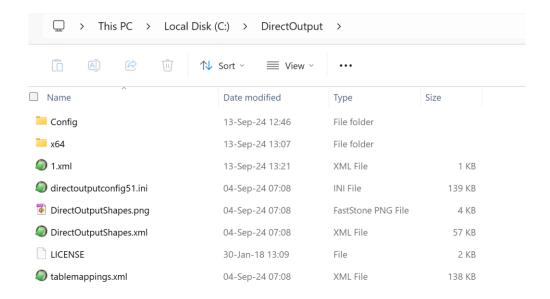

This will download a copy of the configuration files onto your PC. All you need to do now is to extract the zipfile into your **C:\DirectOutput** directory (or wherever DOF is installed on your PC) and overwrite all files:

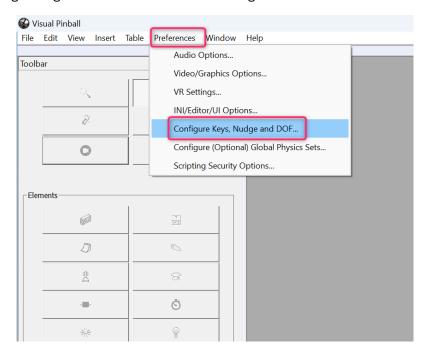

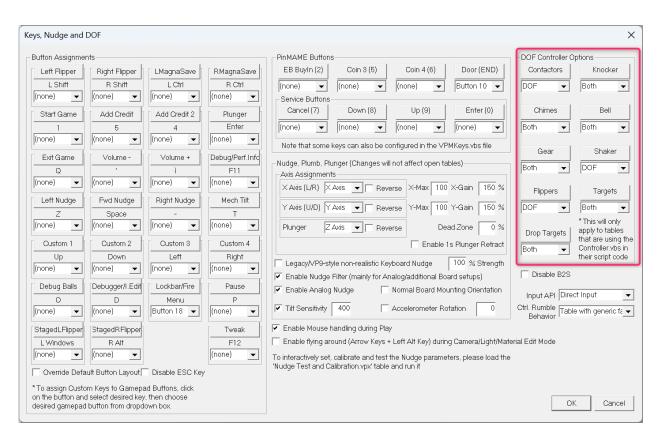

Visual Pinball configuration

Replicate the following configuration in Visual Pinball settings:

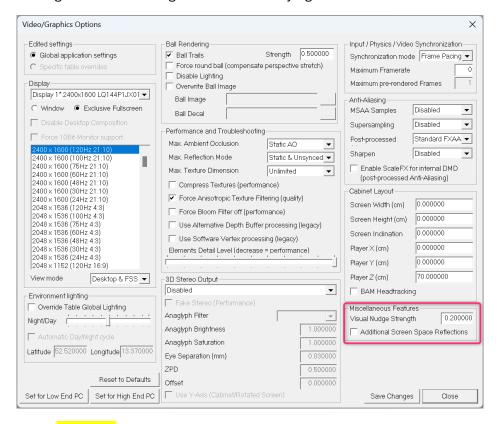

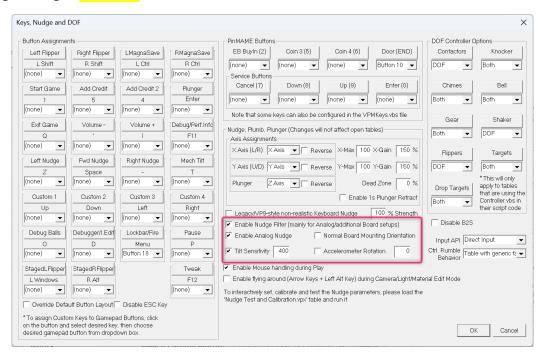

Nudge/Tilt configuration in Visual Pinball

We recommend starting with the following values and modifying them afterwards:

Visual Nudge Strength: 0.200000

Your VirtuaTilt should now be able to play Visual Pinball and have feedback on all supported tables!

Troubleshooting Tips

• If you experience USB 3.0 ports disconnecting and reconnecting, <u>change to an USB 2.0 port</u> <u>directly connected to your PC motherboard (rear ports)</u>, instead of using front PC ports (connected to motherboard via cable).
