

VirtuaTilt – Pinball M Setup

Following some basic instructions to have your new VirtuaTilt up and running with Pinball M and its new DOFLinx support (full feedback!).

Download **DOFLinx** latest package from here: [Releases · DOFLinx/DOFLinx \(github.com\)](https://github.com/DOFLinx/DOFLinx/releases)

Download also **B2S backglass set** for DOFLinx with Pinball M: [Release B2S Back glass set for DOFLinx with Pinball M V2 · DOFLinx/B2S-Back-Glasses · GitHub](https://github.com/DOFLinx/B2S-Back-Glasses/releases)

NOTE: Latest DOFLinx is required for Pinball M.

Please always refer to official DOFLinx guides available at:

<https://doflinx.github.io/docs/>

https://doflinx.github.io/docs/getting-started/08_PinballM.html

DOFLinx Setup

PREREQUISITES:

- **B2S Server** already installed <https://github.com/vpinball/b2s-backglass/releases>
- **DirectOutput** configured (have a look at **VirtuaTilt-RP2040_SetupGuide_v1.x.pdf** guide)
- **VTConfig-FX-FX3-DOFLinx_x1.X.json** profile loaded in **Pinscape Pico Config Tool**

Create a folder **C:\DOFLinx** and uncompress the above zip package (remember to unblock it):

Run **DOFLinxConfig.exe** file in **DOFLinx** folder as administrator:

Turn on your VirtuaTilt power switch and click on **Configure button and work through all settings:**

You need to configure **Key Settings**, **Emulators**, **Inputs** and **Toys** tabs:

Click on “**Create DOFLinx .INI File**” when you’re done:

Edit properties of **DOFLinx – Shortcut.lnk** file and add the above string in Target field:

For automatic startup at every boot, put the shortcut in Startup folder:

Reboot the machine. If your DOFLinx.ini is configured correctly you should not have any error in debug logs (launch DOFLinx - Shortcut to check):

Accelerometer/Analog Plunger configuration

Pinball M emulator do not support analog plunger natively. However, new VirtuaTilt has native support for accelerometer and plunger (**X360CE** emulator is not needed anymore)!

Enabling Pinball M for DOFLinx

Copy **DOFLinxTrigger.dll** from where you unzipped the DOFLinx download to the same folder

as PinBallM-Win64-Shipping.exe (**C:\Program Files (x86)\Steam\steamapps\common\Pinball M\PinballM\Binaries\Win64**)

Make sure that you've got the LINX files from the \LINX folder in the DOFLinx download zip in a folder where you want them, ie **C:\DOFLinx\Linx**

Edit your **DOFLinx.INI** to make Pinball M activate DOFLinx by adding in the **PROCESSES=** line **PinballM-Win64-Shipping**, so if you want for example MAME and PinballM to activate DOFLinx you would have:

PROCESSES=Mame,PinballM-Win64-Shipping

Note: **PinballM-Win64-Shipping** is the process to monitor for, but you still run **PinballM.exe** to start PinballFX.

Be sure to have the **PATH_LINUX=** and **PATH_LINUX_B2S=** parameters pointing to the place you put the Pinball M files.

Make sure you have a **** on the end of the path, so **C:\DOFLinx\Linx**

PATH_PIXELCADE=C:\Pixelcade

PATH_HI2TXT=C:\HI2TXT

PATH_LINUX=C:\DOFLinx\Linx

PATH_LINUX_B2S=C:\DOFLinx\B2S

MAME_PROCESS=Mame

PROCESSES=PinballFX-Win64-Shipping,Pinball FX3,Pinball FX2,Future Pinball

PROCESSES_LINUX=PinballM-Win64-Shipping,IMPball-Win64-Shipping

You can get the complete set of active backglassses for Pinball M from

<https://github.com/DOFLinx/B2S-Back-Glasses/releases> and place them in the folder you just set up above.

Reboot the machine and check that **DOFLinx process** is running:

Go to Steam **Settings** → **Controller**

Disable everything under "External Gamepad Settings" with the except of "**Enable Steam Input for generic controllers**".

Start Pinball M, go to **Options | Cabinet Support | General** and **activate cabinet mode**:

Disable the Backglass Window as you will use the DOFLinx active backglasses:

Go to the **DOFLinx** tab, **enable it**:

Start Pinball M and have fun with full DOFLinx feedback!

If everything was setup correctly you should see DOFLinx logo while loading:

Troubleshooting Tips

If DOFLinx logo is present but DOFLinx feedback is not working, quit the game then kill DOFLinx process in Task Manager and run it again manually from C:\DOFLinx folder. Then restart the game.

DOFLinx.INI file for VirtuaTilt

You can have a look at the following **DOFLinx.ini** file as a reference for your VirtuaTilt. Be sure to correctly configure all paths:

```
#####
#####

#

# The config file for DOFLinx Starter MAME, Pinball FX, Pinball M and Infected Mushroom Pinball
# To find out more about each parameter have a read of the included main guide 'DOFLinx Guide'
#

#####
#####

# 0 = OFF (normal operation), 1 = ON - When ON a window will appear and a log file will be created in the EXE
directory.

DEBUG=0

#location of some general files

COLOUR_FILE=C:\DirectOutput\directoutputconfig120.ini

DIRECTOUTPUTGLOBAL=C:\DirectOutput\Config\GlobalconfigPico1.xml

PATH_B2S_SERVER=C:\vPinball\VisualPinball\Tables\

#!!!!!!!!!!!!!!!!!!!!!!

Use VirtuaTilt without DOF/DOFLinx

One of the main features of the new VirtuaTilt is the possibility to use it without going into DOF/DOFLinx configurations and benefit of feedback from solenoids and shaker motor, as well as analog plunger and accelerometer nudging. Just Plug&Play !

The **XInput mode** is used in Pinscape Pico firmware to achieve that.

What you need to do is load **VTConfig-STEAM-XInput_v1.X.json** profile in **Pinscape Pico Config Tool** :

Start **Steam** and go to **Settings** → **Controller**

Disable everything under "External Gamepad Settings" with the except of "**Enable Steam Input for Xbox controllers**" and "**Game rumble**":

That's it! Launch your favorite Virtual Pinball game and have fun.

IMPORTANT NOTE: Xbox drivers for Windows installation is required (see [Xbox Drivers Installation](#) chapter in Main Setup Guide).
